

THE FIRST OCCURRENCE OF CERTAIN LARGE PRIME GAPS

RICHARD P. BRENT

ABSTRACT

The first occurrence of a string of $2r - 1$ composite numbers between two primes (denoted by $f(r)$ and $f(r) + 2r$) is tabulated for $f(r)$ in the range $2.6 \times 10^{12} < f(r) \leq 4.444 \times 10^{12}$. This extends earlier computations in the range $f(r) \leq 2.6 \times 10^{12}$.

COMMENTS

Only the Abstract is given here. The full paper appeared as [2]. It is an extension of [1], which covers the range $f(r) \leq 2.6 \times 10^{12}$.
