#### FACTOR: AN INTEGER FACTORIZATION PROGRAM FOR THE IBM PC

# RICHARD P. BRENT

# Abstract

Factor is a program which accesses a large database of factors of integers of the form  $a^n \pm 1$ . As of October 1989 the database contains more than 30,000 factors of size at least  $10^4$ . The program Factor implements a simple version of the Elliptic Curve algorithm if it is unable to complete a factorization using trial division and the factor database.

Factor is written in Turbo Pascal and runs on IBM PC or compatible computers. This report describes Factor and various related programs. The programs and the factor database are available from the author.

### Comments

Only the Abstract is given here. The full report appeared as [1]. The program *Factor* is a convenient way of accessing and updating the factor tables [2]. As of June 1993, the database mentioned in the Abstract has grown to more than 174,000 factors.
