

KNUTH'S CONSTANTS TO 1000 DECIMAL AND
1100 OCTAL PLACES

by

TECHNICAL REPORT NO. 47, SEPTEMBER, 1975.

ISBN 0 85842 013 9

1. INTRODUCTION

Knuth [9] gives 33 mathematical constants to 40 decimal and 44 octal places, and suggests that it would be worthwhile to compute them to much higher precision [10]. This report gives the constants correctly rounded to 1000 decimal and 1100 octal places.

2. DESCRIPTION OF THE COMPUTATION

The computation was performed on a Univac 1108 computer using a Fortran multiple-precision arithmetic package [3]. The main program is a slight modification of the program TEST described in [3].

The constants were computed twice, once with base 10000 and 260 floating-point digits, and once with base 11701 and 250 digits. Each run took about 44 minutes of machine time, and both runs produced identical results. Where possible, the constants have also been checked against published values [1, 4-8, 11, 12, 14-17].

The program could easily be modified to give higher precision. From [2, 3, 13], it is theoretically possible to evaluate the constants to t decimal digits in time $O(t \cdot \log^3(t) \log(\log(t)))$, although the present implementation of the multiple-precision package does not attain this bound.

3. TABLES OF KNUTH'S CONSTANTS

The following constants are given below to 1000 decimal and 1100 octal places: $\sqrt{2}$, $\sqrt{3}$, $\sqrt{5}$, $\sqrt{10}$, $2^{1/3}$, $3^{1/3}$, $2^{1/4}$, $\ln(2)$, $\ln(3)$, $\ln(10)$, $1/\ln(2)$, $1/\ln(10)$, π , $\pi/180$, $1/\pi$, π^2 , $\sqrt{\pi} = \Gamma(\frac{1}{2})$, $\Gamma(1/3)$, $\Gamma(2/3)$, e , $1/e$, e^2 , γ , $\ln(\pi)$, $\phi = \frac{1}{2}(1 + 5^{\frac{1}{2}})$, e^γ , $e^{\pi/4}$, $\sin(1)$, $\cos(1)$, $\zeta(3)$, $\ln(\phi)$, $1/\ln(\phi)$, and $-\ln(\ln(2))$.
