AN ASYMPTOTIC EXPANSION INSPIRED BY RAMANUJAN

RICHARD P. BRENT

Abstract

Corollary 2, Entry 9, Chapter 4 of Ramanujan's first notebook [1] claims that

$$\sum_{k=1}^{\infty} \frac{(-1)^{k-1}}{nk} \left(\frac{x^k}{k!}\right)^n \sim \ln x + \gamma$$

as $x \to \infty$. This is known to be correct for the case $n = 1$, but incorrect for $n \geq 3$. We show that the result is correct for $n = 2$. We also consider the order of the error term, and discuss a different, correct generalisation of the case $n = 1$.

Comments

Only the Abstract is given here. The full report appeared as [2]. The results were also presented and appeared in [3]. The generalisation mentioned in the Abstract was suggested by Brent and McMillan in [4].
